

Some Ideas for Presentation

(This is just a guide, but you can do it anyway you like)

Executive Summary

Our Team Name

Whatever is useful to the audience
E.g. your division you belong to, etc

Our Team Members

- List the names of your team members
- Put photos if you want
- Briefly talk about the distribution of work

Our Project

- This is where you describe your project
 - What it does
 - What it attempts to solve
 - Use diagrams to bring your points across

**Diagram(s) to show the
flow of your system**

**You can also put some
screenshots here**

Demo

Architectural diagram of your system

Tech Stack

- Describe the tech stack you used in your system
 - E.g. Docker, OpenShift, Databases, Angular, Vue, SpringBoot, .NET, Python, etc

Conclusion

- What have we learned?
 - Be candid and feel free to share negative points
 - But overall you should be positive
- What could have been done if given more time
- Future enhancements
- How could this be useful to your work at your company

The Road Ahead

List down the long term visions of your project

Some Tips and Tricks for Presentation

- Limit your bullet points to at most three (if you used bullets at all)

Your slides are to guide you on what to say, not for your audience to fixate on

It would be better to have 10 slides each containing an important point than 1 single slide containing the 10 points

Use realistic test data
Don't use data like:
Test 1, Test 2, User 1, User 2, etc

Read your audience

Change your rhythm if the audience starts snoozing...

Enjoy the journey as
much as the destination.
